

Date: __ / __ / __

Dear Child Care Profession

I have carefully evaluated _____ and have diagnosed him/her as having:

- | | |
|-----------------------------|--|
| <input type="radio"/> Cold | <input type="radio"/> Middle ear fluid (Otitis Media with Effusion, OME) |
| <input type="radio"/> Cough | <input type="radio"/> Viral sore throat |
| <input type="radio"/> Flu | <input type="radio"/> Other: _____ |

This illness is caused by a virus. Antibiotic treatment will not cure a viral illness (antibiotics only are effective in treating bacterial infections). In fact, if antibiotics are given when they are not needed, they may be harmful by increasing the child's risk of a resistant infection.

This child may return to day care when he/she does not have a fever. At that point most children can participate in activities, and do not require so much care that the health and safety of other children would be jeopardized. Excluding children with viral illness does not decrease the spread of infection to other children because viruses are likely to be spread even before symptoms of illness occur.

Sincerely yours,

P.S. Here are some expert reviews that support these recommendations.
