

Health Insurance Coverage: Early Release of Estimates From the National Health Interview Survey, 2024

by Robin A. Cohen, Ph.D., Elizabeth M. Briones, Ph.D., and Inderbir Sohi, M.S.P.H.
Division of Health Interview Statistics, National Center for Health Statistics

What's New

- This report presents health insurance coverage estimates from the 2024 National Health Interview Survey, along with selected trends from 2020 through 2024.

Highlights

- In 2024, 27.2 million people of all ages (8.2%) were uninsured at the time of interview. This was higher than but not significantly different from 2023, when 25.0 million people of all ages (7.6%) were uninsured.
- In 2024, among adults ages 18–64, 11.6% were uninsured at the time of interview, 21.2% had public coverage, and 69.1% had private health insurance coverage.
- The percentage of adults ages 18–64 who had public coverage in 2024 (21.2%) was lower than the percentage who had public coverage in 2023 (23.0%).
- In 2024, among children ages 0–17 years, 5.1% were uninsured, 41.6% had public coverage, and 55.4% had private health insurance coverage.
- The percentage of people younger than age 65 with exchange-based coverage increased from 3.8% in 2020 to 5.7% in 2024.

This report presents estimates of health insurance coverage for the U.S. civilian noninstitutionalized population based on data from the 2024 National Health Interview Survey (NHIS). The National Center for Health Statistics is releasing these estimates before final editing and final weighting to provide access to the most recent information from NHIS. Estimates are disaggregated by age group, sex, family income (as a percentage of the federal poverty level [FPL]), race and ethnicity, and state Medicaid expansion status. Detailed appendix tables contain all estimates presented in the figures and additional estimates from NHIS for selected population characteristics. With 5 years of comparable data available starting with 2020, this report provides data on trends similar to reports using 2019 data and earlier. Quarterly estimates by age group and family income, and more information about NHIS and the Early Release Program, are available from the [NHIS website](#).

Figure 1. Percentage and number of people who were uninsured, by age group and year: United States, 2023–2024

NOTES: People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government plan, or military plan. People were also defined as uninsured if they had only Indian Health Service coverage or had only a private plan that paid for one type of service, such as accidents or dental care. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.

SOURCE: National Center for Health Statistics, National Health Interview Survey, 2023–2024.

- In 2024, 27.2 million people of all ages (8.2%) were uninsured at the time of interview. This was higher than but not significantly different from 2023, when 25.0 million people of all ages (7.6%) were uninsured ([Figure 1](#)).
- In 2024, 23.1 million adults ages 18–64 (11.6%) were uninsured. This was higher than but not significantly different from 2023, when 21.8 million adults ages 18–64 (10.9%) were uninsured.

- In 2024, 3.7 million children ages 0–17 years (5.1%) were uninsured. This was higher than 2023, when 2.8 million children (3.9%) were uninsured.
- Adults ages 18–64 (11.6%) were most likely to be uninsured, followed by children ages 0–17 years (5.1%) and adults age 65 and older (0.6%) in 2024.

Figure 2. Percentage of adults ages 18–64 who were uninsured or had public or private coverage, by year: United States, 2020–2024

NOTES: People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government plan, or military plan. People were also defined as uninsured if they had only Indian Health Service coverage or had only a private plan that paid for one type of service, such as accidents or dental care. Public coverage includes Medicaid, CHIP, state-sponsored or other government-sponsored health plan, Medicare, and military plans. Private coverage includes any comprehensive private insurance plan (including health maintenance and preferred provider organizations). These plans include those obtained through an employer, purchased directly, purchased through local or community programs, or purchased through the Health Insurance Marketplace or a state-based exchange. Private coverage excludes plans that pay for only one type of service, such as accidents or dental care. A small number of people were covered by both public and private plans and were included in both categories. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.

SOURCE: National Center for Health Statistics, National Health Interview Survey, 2020–2024.

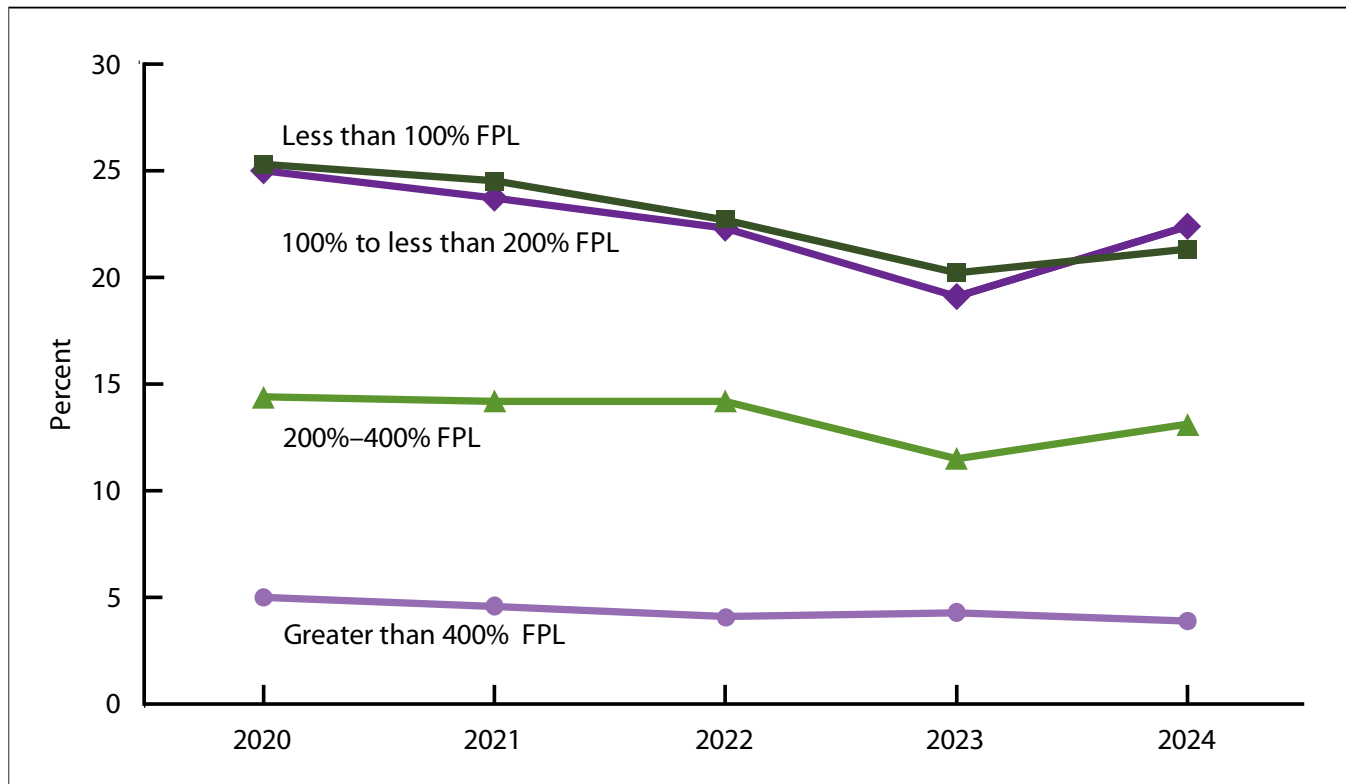

- Among adults ages 18–64, the percentage who were uninsured decreased from 13.9% in 2020 to 11.6% in 2024 (Figure 2). The percentage of adults who were uninsured in 2024 (11.6%) was higher than but not significantly different from 2023 (10.9%).
- Public coverage for adults increased from 2020 (20.5%) through 2023 (23.0%), and then decreased to 21.2% in 2024.
- Private coverage for adults generally increased from 2020 (67.5%) through 2024 (69.1%). Private coverage in 2024 (69.1%) was higher than but not significantly different from the percentage who had private coverage in 2023 (68.1%).

Figure 3. Percentage of children ages 0–17 years who were uninsured or had public or private coverage, by year: United States, 2020–2024

NOTES: People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government plan, or military plan. People were also defined as uninsured if they had only Indian Health Service coverage or had only a private plan that paid for one type of service, such as accidents or dental care. Public coverage includes Medicaid, CHIP, state-sponsored or other government-sponsored health plan, Medicare, and military plans. Private coverage includes any comprehensive private insurance plan (including health maintenance and preferred provider organizations). These plans include those obtained through an employer, purchased directly, purchased through local or community programs, or purchased through the Health Insurance Marketplace or a state-based exchange. Private coverage excludes plans that pay for only one type of service, such as accidents or dental care. A small number of people were covered by both public and private plans and were included in both categories. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.

SOURCE: National Center for Health Statistics, National Health Interview Survey, 2020–2024.

- The percentage of children ages 0–17 years who were uninsured generally decreased from 5.1% in 2020 to 3.9% in 2023, followed by an increase to 5.1% in 2024 (Figure 3).
- Public coverage did not change significantly from 2020 (42.2%) through 2023 (44.2%), but then decreased to 41.6% in 2024.
- No significant trend in private coverage was observed between 2020 (54.9%) and 2024 (55.4%). The percentage of children who had private coverage in 2024 (55.4%) was higher than but not significantly different from the percentage who had private coverage in 2023 (54.0%).

Figure 4. Percentage of adults ages 18–64 who were uninsured, by family income and year: United States, 2020–2024

NOTES: Family income is based on a percentage of the federal poverty level (FPL). People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government plan, or military plan. People were also defined as uninsured if they had only Indian Health Service coverage or had only a private plan that paid for one type of service, such as accidents or dental care. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population. SOURCE: National Center for Health Statistics, National Health Interview Survey, 2020–2024.

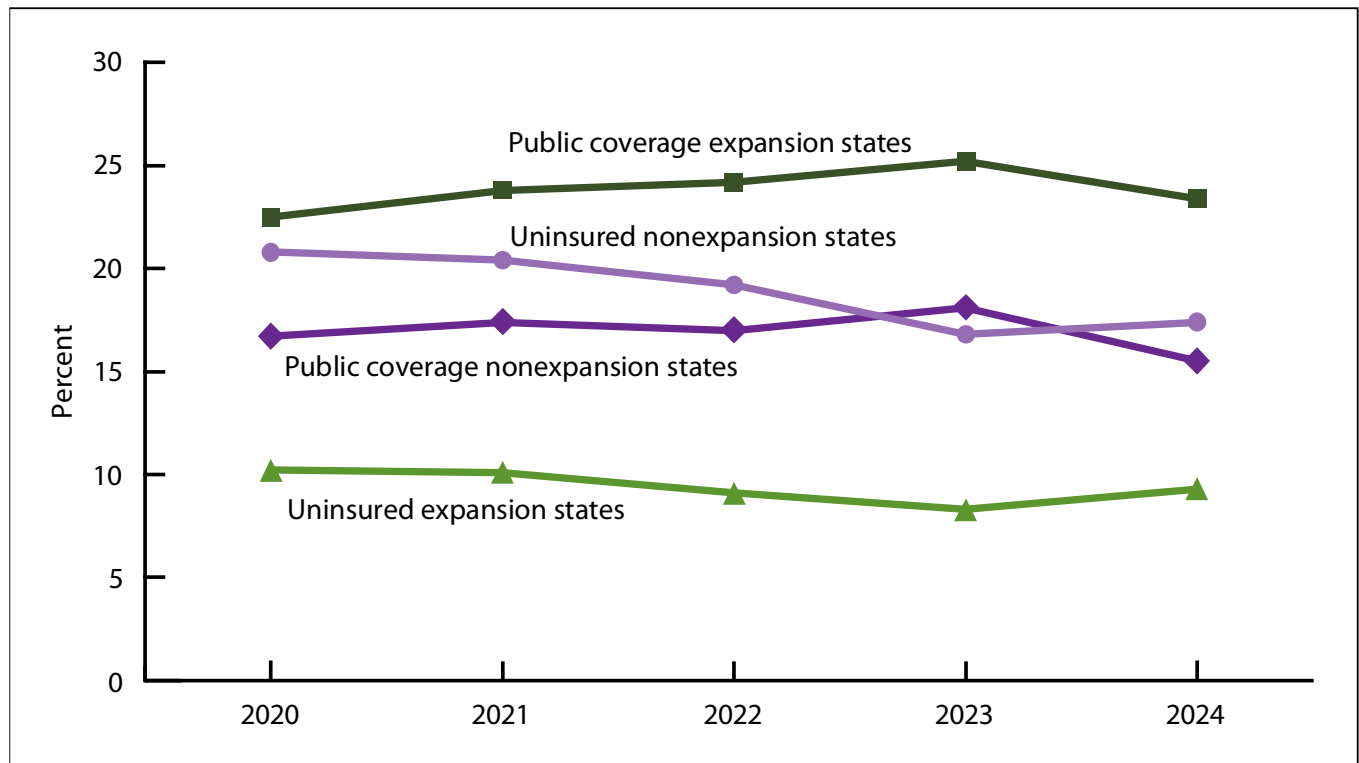

- Among adults with family incomes less than 100% FPL, the percentage who were uninsured generally decreased from 25.3% in 2020 to 21.2% in 2024 (Figure 4). The percentage who were uninsured in 2024 (21.2%) was higher than but not significantly different from the percentage uninsured in 2023 (20.2%).
- Among adults with incomes 100% to less than 200% FPL, the percentage who were uninsured generally decreased from 25.0% in 2020 to 22.4% in 2024. The percentage of uninsured increased from 19.1% in 2023 to 22.4% in 2024.
- Among adults with incomes 200% to 400% FPL, the percentage who were uninsured generally decreased from 14.4% in 2020 to 13.1% in 2024. The percentage who were uninsured in 2024 (13.1%) was higher than the percentage who were uninsured in 2023 (11.5%).
- Among adults with incomes greater than 400% FPL, the percentage who were uninsured generally decreased from 5.0% in 2020 to 3.9% in 2024. No significant difference was observed in the percentage of adults who were uninsured between 2023 (4.3%) and 2024 (3.9%).
- In 2024, the percentage of adults who were uninsured was highest among those with family incomes at 100% to less than 200% FPL and those with family incomes at less than 100% FPL, followed by those with family incomes at 200% to 400% FPL and those with family incomes above 400% FPL.

Figure 5. Percentage of adults ages 18–64 who were uninsured, by race and ethnicity and year: United States, 2020–2024

NOTES: People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government plan, or military plan. People were also defined as uninsured if they had only Indian Health Service coverage or had only a private plan that paid for one type of service, such as accidents or dental care. People of Hispanic origin may be of any race. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.

SOURCE: National Center for Health Statistics, National Health Interview Survey, 2020–2024.

- Among Hispanic adults, the percentage who were uninsured generally decreased from 29.3% in 2020 to 24.6% in 2024. No significant change was seen in the percentage of Hispanic adults uninsured between 2023 (24.8%) and 2024 (24.6%) (Figure 5).
- Among Black non-Hispanic (subsequently, Black) adults, the percentage who were uninsured decreased from 14.6% in 2020 to 10.5% in 2024. No significant change was observed in the percentage of Black adults who were uninsured between 2023 (10.4%) to 2024 (10.5%).
- Among White non-Hispanic (subsequently, White) adults, the percentage who were uninsured generally decreased from 9.2% in 2020 to 7.9% in 2024. The percentage of uninsured increased from 6.8% in 2023 to 7.9% in 2024.
- Among Asian non-Hispanic (subsequently, Asian) adults, the percentage who were uninsured generally decreased from 8.8% in 2020 to 5.4% in 2024. The observed increase from 2023 (4.4%) to 2024 (5.4%) was not significant.
- In 2024, Hispanic adults were most likely to lack health insurance coverage, followed by Black adults, White adults, and Asian adults.

Figure 6. Percentage of adults ages 18–64 who had public coverage or were uninsured, by state Medicaid expansion status and year: United States, 2020–2024

NOTES: Public coverage includes Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, Medicare, and military plans. People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, CHIP, state-sponsored or other government plan, or military plan. People were also defined as uninsured if they had only Indian Health Service coverage or had only a private plan that paid for one type of service, such as accidents or dental care. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.

SOURCE: National Center for Health Statistics, National Health Interview Survey, 2020–2024.

- Among adults ages 18–64 living in Medicaid expansion states, the percentage with public coverage increased from 22.5% in 2020 to 25.2% in 2023, then decreased to 23.4% in 2024 (Figure 6).
- Among adults living in Medicaid expansion states, the percentage who were uninsured generally decreased from 10.2% in 2020 to 9.3% in 2024. The percentage who were uninsured in 2024 (9.3%) was higher than the percentage who were uninsured in 2023 (8.3%).
- Among adults living in non-Medicaid expansion states, the percentage with public coverage increased from 16.7% in 2020 to 18.1% in 2023, and then decreased to 15.5% in 2024.
- Among adults living in non-Medicaid expansion states, the percentage who were uninsured generally decreased from 20.8% in 2020 to 17.4% in 2024. The percentage who were uninsured between 2023 (16.8%) and 2024 (17.4%) was not significant.
- In 2024, adults living in Medicaid expansion states were more likely to have public coverage and less likely to be uninsured than those living in non-Medicaid expansion states.

Figure 7. Percentage of people younger than age 65 who had exchange-based private health insurance coverage, by selected characteristics: United States, 2024

NOTES: Exchange-based coverage is a private health insurance plan purchased through the Health Insurance Marketplace or state-based exchanges that were established as part of the Affordable Care Act (ACA) of 2010 (P.L. 111–148, P.L. 111–152). FPL is federal poverty level. People of Hispanic origin may be of any race. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population. SOURCE: National Center for Health Statistics, National Health Interview Survey, 2024.

- In 2024, 5.7% of people younger than age 65 had exchange-based coverage ([Figure 7](#)).
- Exchange-based coverage was higher among females (6.2%) than males (5.2%).
- Exchange-based coverage was higher among those with family incomes from 100% to less than 200% FPL (8.4%), compared with those with family incomes less than 100% FPL (5.3%), 200% to 400% FPL (6.8%), and above 400% FPL (3.4%).
- Exchange-based coverage was higher among Hispanic people (6.8%) than those who are Black (5.5%) or White (5.3%).
- Exchange-based coverage increased from 4.8% in 2023 to 5.7% in 2024 ([Table VII](#)). The percentage of people younger than age 65 with exchange-based coverage increased from 3.8% in 2020 to 5.7% in 2024.

Technical Notes

All estimates in this report are based on preliminary data from the 2024 National Health Interview Survey (NHIS). The National Center for Health Statistics (NCHS) is releasing the 2024 estimates before final data editing and final weighting to provide access to the most recent information from NHIS. Differences between Summary Health Statistics (based on final data files) and those found in NHIS Early Release products (based on preliminary data files) are typically less than or equal to 0.5 percentage points.

Data source

Data used to produce this Early Release report were derived from the Sample Adult and Sample Child components from the 2020–2024 NHIS. NHIS is a nationally representative household survey conducted throughout the year to collect information on health status, health-related behaviors, and healthcare access and utilization. The NHIS interview begins by identifying everyone who usually lives or stays in the household. Then, one “sample adult” age 18 or older and one “sample child” age 17 years or younger (if any children live in the household) are randomly selected. Information about the sample adults is collected from the sample adults themselves unless they are physically or mentally unable to report, in which case a knowledgeable proxy can answer for them. Information about the sample child is collected from a parent or adult who is knowledgeable about and responsible for the health care of the sample child. This respondent may or may not also be the sample adult. Data analysis for the January through December 2024 NHIS was based on information collected on 32,704 sample adults and 8,375 sample children. Visit the NHIS website at: <https://www.cdc.gov/nchs/nhis.htm> for more information about the design, content, and use of NHIS.

Estimation procedures

NCHS creates survey sampling weights to produce representative national estimates. The base weight is equal to the inverse of the probability of selection of the sample address. These weights are adjusted for household and person-level nonresponse using recursive partitioning. Nonresponse-adjusted weights are further calibrated to U.S. Census Bureau population projections and American Community Survey 1-year estimates for age, sex, race and ethnicity, educational attainment, housing tenure, census division, and metropolitan statistical area status. Point estimates and estimates of their variances were calculated using SUDAAN software (RTI International, Research Triangle Park, N.C.) to account for the complex sample design of NHIS, considering stratum and primary sampling unit identifiers. The Taylor series linearization method was chosen for variance estimation. Trends were evaluated using logistic regression analysis.

All estimates shown meet NCHS standards of reliability as specified in “National Center for Health Statistics Data Presentation Standards for Proportions” (1). All differences discussed are statistically significant unless otherwise noted. Differences between percentages were evaluated using two-sided significance tests at the 0.05 level. Lack of comment regarding the difference between any two estimates does not necessarily mean that the difference was tested and found to be not significant.

2024 (Jul–Dec)	12.0 (11.1–13.0)	21.3 (20.1–22.4)	68.7 (67.2–70.1)
65 and older			
2020	0.8 (0.5–1.1)	95.9 (95.3–96.4)	50.2 (48.7–51.7)
2021	0.6 (0.4–0.9)	96.1 (95.5–96.5)	47.1 (45.5–48.6)
2022	0.6 (0.4–0.9)	95.2 (94.7–95.8)	45.7 (44.3–47.2)
2023	0.7 (0.4–0.9)	95.7 (95.2–96.2)	43.4 (42.0–44.7)
2024	0.6 (0.4–0.9)	95.6 (95.0–96.2)	43.2 (41.8–44.7)
2024 (Jan–Jun)	0.6 (0.4–1.0)	95.8 (95.0–96.4)	42.7 (41.1–44.3)
2024 (Jul–Dec)	0.6 (0.3–1.1)	95.5 (94.8–96.2)	43.8 (41.8–45.8)

¹People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, or military plan. People also were defined as uninsured if they had only Indian Health Service coverage or only a private plan that paid for one type of service, such as accidents or dental care.

²Includes Medicaid, CHIP, state-sponsored or other government-sponsored health plan, Medicare, and military plans. A small number of people were covered by both public and private plans and were included in both categories.

³Includes any comprehensive private insurance plan (including health maintenance and preferred provider organizations). These plans include those obtained through an employer, purchased directly, purchased through local or community programs, or purchased through the Health Insurance Marketplace or a state-based exchange. Private coverage excludes plans that pay for only one type of service, such as accidents or dental care. A small number of people were covered by both public and private plans and were included in both categories.

NOTES: CI is confidence interval. Due to the COVID-19 pandemic, data collection switched to a telephone-only mode beginning March 19, 2020. Personal visits (with telephone attempts first) resumed in all areas in September 2020. In addition, from August through December 2020, a subsample of adult respondents who completed the National Health Interview Survey in 2019 were recontacted by telephone and asked to participate again. Response rates were lower and respondent characteristics were different in April–December 2020. Differences observed in estimates between April–December 2020 and other periods may have been impacted by these differences in respondent characteristics. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.

¹People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, or military plan. People also were defined as uninsured if they had only Indian Health Service coverage or only a private plan that paid for one type of service, such as accidents or dental care.

²Includes Medicaid, CHIP, state-sponsored or other government-sponsored health plan, Medicare, and military plans. A small number of people were covered by both public and private plans and were included in both categories.

³Includes any comprehensive private insurance plan (including health maintenance and preferred provider organizations). These plans include those obtained through an employer, purchased directly, purchased through local or community programs, or purchased through the Health Insurance Marketplace or a state-based exchange. Private coverage excludes plans that pay for only one type of service, such as accidents or dental care. A small number of people were covered by both public and private plans and were included in both categories.

NOTES: Due to the COVID-19 pandemic, data collection switched to a telephone-only mode beginning March 19, 2020. Personal visits (with telephone attempts first) resumed in all areas in September 2020. In addition, from August through December 2020, a subsample of adult respondents who completed the National Health Interview Survey in 2019 were recontacted by telephone and asked to participate again. Response rates were lower and respondent characteristics were different in April–December 2020. Differences observed in estimates between April–December 2020 and other periods may have been impacted by these differences in respondent characteristics. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.

2024 (Jul–Dec)	3.9 (3.2–4.8)	6.7 (5.8–7.8)	90.8 (89.6–91.8)

¹Family income is based on a percentage of the federal poverty level (FPL). Income categories are based on the ratio of the family's income in the previous calendar year to the appropriate poverty threshold (given the family's size and number of children) defined by the U.S. Census Bureau for that year (Semega J, Kollar M, Shrider EA, Creamer J. Income and poverty in the United States: 2019. Current Population Reports. 2020;P60–270; Shrider EA, Kollar M, Chen F, Semega J. Income and poverty in the United States: 2020. Current Population Reports. 2021;P60–273; Semega J, Kollar M. Income in the United States: 2021. Current Population Reports. 2022;P60–276; Shrider EA, Creamer J.

Income in the United States: 2022. Current Population Reports. 2023;P60–280; Guzman G, Kollar M. Current Population Reports, Income in the United States: 2023. 2024;P60–282.). The percentage of respondents younger than age 65 with unknown poverty status was 10.1% in 2020, 11.6% in 2021, 12.1% in 2022, 13.7% in 2023, and 13.4% in 2024. People with unknown poverty status are not shown in this table. Estimates may differ from estimates that are based on both reported and imputed income.

²People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, or military plan. People also were defined as uninsured if they had only Indian Health Service coverage or only a private plan that paid for one type of service, such as accidents or dental care.

³Includes Medicaid, CHIP, state-sponsored or other government-sponsored health plan, Medicare, and military plans. A small number of people were covered by both public and private plans and were included in both categories.

⁴Includes any comprehensive private insurance plan (including health maintenance and preferred provider organizations). These plans include those obtained through an employer, purchased directly, purchased through local or community programs, or purchased through the Health Insurance Marketplace or a state-based exchange. Private coverage excludes plans that pay for only one type of service, such as accidents or dental care. A small number of people were covered by both public and private plans and were included in both categories.

NOTES: CI is confidence interval. Due to the COVID-19 pandemic, data collection switched to a telephone-only mode beginning March 19, 2020. Personal visits (with telephone attempts first) resumed in all areas in September 2020. In addition, from August through December 2020, a subsample of adult respondents who completed the National Health Interview Survey in 2019 were recontacted by telephone and asked to participate again. Response rates were lower and respondent characteristics were different in April–December 2020. Differences observed in estimates between April–December 2020 and other periods may have been impacted by these differences in respondent characteristics. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.

^{*} Estimate does not meet National Center for Health Statistics standards of reliability.

¹Hispanic origin and race are two separate and distinct categories. Race groups are non-Hispanic. People of Hispanic or Latino origin may be of any race or combination of races. Hispanic or Latino origin includes people of Mexican, Puerto Rican, Cuban, Central and South American, or Spanish origin. Race is based on respondents' descriptions of their own racial background. More than one race may be reported. For conciseness, the text, tables, and figures in this report use shorter versions of the 1997 Office of Management and Budget terms for race and Hispanic or Latino origin. For example, the category "not Hispanic, Black or African American, single race" is referred to as "Black, non-Hispanic (subsequently, Black)." Estimates for non-Hispanic people of races other than Asian only, Black only, and White only, or of multiple races, are combined into the "other races and multiple races" category.

²People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, or military plan. People also were defined as uninsured if they had only Indian Health Service coverage or only a private plan that paid for one type of service, such as accidents or dental care.

³Includes Medicaid, CHIP, state-sponsored or other government-sponsored health plan, Medicare, and military plans. A small number of people were covered by both public and private plans and were included in both categories.

⁴Includes any comprehensive private insurance plan (including health maintenance and preferred provider organizations). These plans include those obtained through an employer, purchased directly, purchased through local or community programs, or purchased through the Health Insurance Marketplace or a state-based exchange. Private coverage excludes plans that pay for only one type of service, such as accidents or dental care. A small number of people were covered by both public and private plans and were included in both categories.

NOTES: CI is confidence interval. Due to the COVID-19 pandemic, data collection switched to a telephone-only mode beginning March 19, 2020. Personal visits (with telephone attempts first) resumed in all areas in September 2020. In addition, from August through December 2020, a subsample of adult respondents who completed the National Health Interview Survey in 2019 were recontacted by telephone and asked to participate again. Response rates were lower and respondent characteristics were different in April–December 2020. Differences observed in estimates between April–December 2020 and other periods may have been impacted by these differences in respondent characteristics. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.

¹Under provisions of the Affordable Care Act of 2010 (P.L. 111–148, P.L. 111–152), states have the option to expand Medicaid eligibility to cover adults who have incomes up to and including 138% of the federal poverty level. No deadline is imposed for states to choose to implement the Medicaid expansion, and they may do so at any time. As of January 1, 2024, 40 states and the District of Columbia moved forward with Medicaid expansion.

²People were defined as uninsured if they did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, or military plan. People also were defined as uninsured if they had only Indian Health Service coverage or only a private plan that paid for one type of service, such as accidents or dental care.

³Includes Medicaid, CHIP, state-sponsored or other government-sponsored health plan, Medicare, and military plans. A small number of people were covered by both public and private plans and were included in both categories.

⁴Includes any comprehensive private insurance plan (including health maintenance and preferred provider organizations). These plans include those obtained through an employer, purchased directly, purchased through local or community programs, or purchased through the Health Insurance Marketplace or a state-based exchange. Private coverage excludes plans that pay for only one type of service, such as accidents or dental care. A small number of people were covered by both public and private plans and were included in both categories.

⁵For 2020, states moving forward with Medicaid expansion included: Alaska, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Hawaii, Idaho, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Montana, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, Utah, Vermont, Virginia, Washington, and West Virginia. The District of Columbia also moved forward with Medicaid expansion. Beginning with 2021, Nebraska was added to this grouping. Beginning with 2022, two states have been added to this grouping: Missouri and Oklahoma. Beginning with 2024, two states have been added to this grouping: North Carolina and South Dakota.

⁶For 2020, states not moving forward with Medicaid expansion included: Alabama, Florida, Georgia, Kansas, Mississippi, Missouri, Nebraska, North Carolina, Oklahoma, South Carolina, South Dakota, Tennessee, Texas, Wisconsin, and Wyoming. Beginning with 2021, Nebraska was removed from this grouping. Beginning with 2022, two states have been removed from this grouping: Missouri and Oklahoma. Beginning with 2024, two states have been removed from this grouping: North Carolina and South Dakota.

NOTES: CI is confidence interval. Due to the COVID-19 pandemic, data collection switched to a telephone-only mode beginning March 19, 2020. Personal visits (with telephone attempts first) resumed in all areas in September 2020. In addition, from August through December 2020, a subsample of adult respondents who completed the National Health Interview Survey in 2019 were recontacted by telephone and asked to participate again. Response rates were lower and respondent characteristics were different in April–December 2020. Differences observed in estimates between April–December 2020 and other periods may have been impacted by these differences in respondent characteristics. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.

2024 (Jan–Jun)	3.9 (3.1–4.8)	4.4
2024 (Jul–Dec)	3.0 (2.5–3.7)	3.5

¹Family income is based on a percentage of the federal poverty level (FPL). Income categories are based on the ratio of the family's income in the previous calendar year to the appropriate poverty threshold (given the family's size and number of children) defined by the U.S. Census Bureau for that year (Semega J, Kollar M, Shrider EA, Creamer J. Income and poverty in the United States: 2019. Current Population Reports, 2020;P60–270.; Shrider EA, Kollar M, Chen F, Semega J. Income and poverty in the United States: 2020. 2021;P60–273; Semega J, Kollar M. Income in the United States: 2021. Current Population Reports. 2022;P60–276; Shrider EA, Creamer J. Income in the United States: 2022. Current Population Reports. 2023;P60–280; Guzman G, Kollar M. Income in the United States: 2023. Current Population Reports. 2024;P60–282.). The percentage of respondents younger than age 65 with unknown poverty status was 10.1% in 2020, 11.6% in 2021, 12.1% in 2022, 13.7% in 2023, and 13.4% in 2024. People with unknown poverty status are not shown in this table. Estimates may differ from estimates that are based on both reported and imputed income.

NOTES: Exchange-based coverage is a private health insurance plan purchased through the Health Insurance Marketplace or state-based exchanges that were established as part of the Affordable Care Act of 2010 (P.L. 111–148, P.L. 111–152). Due to the COVID-19 pandemic, data collection switched to a telephone-only mode beginning March 19, 2020. Personal visits (with telephone attempts first) resumed in all areas in September 2020. 2024 (Jan–Jun)	7.1 (5.7–8.7)	4.4
2024 (Jul–Dec)	6.5 (5.1–8.2)	3.9

¹Hispanic origin and race are two separate and distinct categories. Race groups are non-Hispanic. People of Hispanic origin may be of any race or combination of races. Hispanic origin includes people of Mexican, Puerto Rican, Cuban, Central and South American, or Spanish origin. Race is based on respondents' descriptions of their own racial background. More than one race may be reported. For conciseness, the text, tables, and figures in this report use shorter versions of the 1997 Office of Management and Budget terms for race and Hispanic or Latino origin. For example, the category "not Hispanic, Black or African American, single race" is referred to as "Black non-Hispanic."

NOTES: Exchange-based coverage is a private health insurance plan purchased through the Health Insurance Marketplace or state-based exchanges that were established as part of the Affordable Care Act of 2010 (P.L. 111–148, P.L. 111–152). 2024 (Jul–Dec)	7.6 (6.4–9.1)	5.7

¹Under provisions of the Affordable Care Act of 2010 (P.L. 111–148, P.L. 111–152), states have the option to expand Medicaid eligibility to cover adults who have income up to and including 138% of the federal poverty level. No deadline is imposed for states to choose to implement the Medicaid expansion, and they may do so at any time. As of January 1, 2024, 40 states and the District of Columbia moved forward with Medicaid expansion.

²For 2020, states moving forward with Medicaid expansion included: Alaska, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Hawaii, Idaho, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Montana, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, Utah, Vermont, Virginia, Washington, and West Virginia. The District of Columbia also moved forward with Medicaid expansion. Beginning with 2021, Nebraska was added to this grouping. Beginning with 2022, two states have been added to this grouping: Missouri and Oklahoma. Beginning with 2024, two states have been added to this grouping: North Carolina and South Dakota.

³For 2020, states not moving forward with Medicaid expansion included: Alabama, Florida, Georgia, Kansas, Mississippi, Missouri, Nebraska, North Carolina, Oklahoma, South Carolina, South Dakota, Tennessee, Texas, Wisconsin, and Wyoming. Beginning with 2021, Nebraska was removed from this grouping. Beginning with 2022, two states have been removed from this grouping: Missouri and Oklahoma. Beginning with 2024, two states have been removed from this grouping: North Carolina and South Dakota.

NOTES: Exchange-based coverage is a private health insurance plan purchased through the Health Insurance Marketplace or state-based exchanges that were established as part of the Affordable Care Act of 2010 (P.L. 111–148, P.L. 111–152). Due to the COVID-19 pandemic, data collection switched to a telephone-only mode beginning March 19, 2020. Personal visits (with telephone attempts first) resumed in all areas in September 2020. In addition, from August through December 2020, a subsample of adult respondents who completed the National Health Interview Survey in 2019 were recontacted by telephone and asked to participate again. Response rates were lower and respondent characteristics were different in April–December 2020. Differences observed in estimates between April–December 2020 and other periods may have been impacted by these differences in respondent characteristics. Data are based on household interviews of a sample of the U.S. civilian noninstitutionalized population.
