

PREVENTING CHRONIC DISEASE

PUBLIC HEALTH RESEARCH, PRACTICE, AND POLICY

2022 Year in Review

U.S. Department of
Health and Human Services
Centers for Disease
Control and Prevention

A WORD FROM THE EDITOR IN CHIEF

Preventing Chronic Disease (PCD) had its most successful year to date in 2022. The journal's impact factor increased from 2.803 in 2020 to 4.354 in 2021, beating last year's record for the biggest increase in PCD's history. PCD's overall rankings have improved in every category. PCD's 5-year impact factor increased from 3.215 to 4.041. The journal ranked 4th out of 30 US open-access journals and ranked 76th out of 585 journals worldwide in the Public Health, Environmental, and Occupational Health open-access journal category by Scimago. One of PCD's major accomplishments this past year was reaching the top 10% of more than 27,000 journals indexed by Scimago. PCD credits these successes to support from CDC's National Center for Chronic Disease Prevention and Health Promotion leadership, along with the journal's growing team of Associate Editors and its Editorial Board and Statistics Review Committee members, who are all committed to ensuring that PCD maintains a high bar in terms of the quality and integrity of its scientific content.

PCD continued to publish rigorous peer-reviewed articles on a variety of critical topics in public health: COVID-19 and chronic diseases; mental health; public health surveillance; use of GIS for public health planning; advancing health equity science research; and public health approaches to addressing cardiovascular health. PCD's acceptance rate remained consistent, from 21.5% in 2021 to 22% in 2022, a reflection of PCD's continued emphasis on manuscripts of the highest quality and scientific rigor. PCD was also consistent in maintaining its primary focus on providing insights on the development, implementation, and evaluation of population-based interventions to prevent chronic diseases and control disease effects on quality of life, morbidity, and mortality.

In 2022, PCD published 4 collections addressing long-standing and emerging public health challenges. In June, PCD published a collection entitled "Geospatial Perspectives on the Intersection of Chronic Disease and COVID-19." This collection brought together scientists and practitioners from the breadth of public health and the social sciences in 11 peer-reviewed articles. These articles provided examples on how geospatial perspectives can contribute to understanding and addressing the intersection of chronic disease and COVID-19, a respiratory disease caused by the SARS-CoV-2 virus. In April, PCD published "Cancer Screening Prevalence and Associated Factors Among US Adults," a collection that featured 11 peer-reviewed articles presenting research on cancer screening trends, determinants of cancer screening, and public health practices that increase cancer screening uptake in specific populations. The collection also included a podcast interview with the authors. In November, the journal published the "2022 Student Paper Contest Collection," a collection of 8 peer-reviewed papers generated by students and their mentors that offers insights into the ways students are developing skills at conceptualizing research, collecting, analyzing, and reporting data, and discussing the public health implications of research findings. In December, PCD published "Global Responses to Prevent, Manage, and Control Cardiovascular Disease," a collection of 21 peer-reviewed articles that advances our understanding of three broad areas of cardiovascular disease (CVD): factors contributing to increases in CVD, factors contributing to disparities in CVD, and collaborative programmatic efforts to decrease CVD risk. This collection offers insight into both the successes and challenges of public health strategies to improve cardiovascular health through prevention, detection, and treatment.

PCD's tremendous success in 2022 would not have been possible without the contributions of its rich pool of qualified peer reviewers. PCD peer reviewers provide their expertise to the journal on a voluntary basis. Several hundred peer reviewers offered their time and service to the journal in 2022, contributing their expertise to make the most informed decisions on papers submitted to the journal. We can't thank our peer reviewers enough for their contribution to PCD's successes this past year. We would also like to thank the journal's Editorial Board, Associate Editors, Statistics Review Committee members, PCD staff, subscribers, and senior leadership in the National Center for Chronic Disease Prevention and Health Promotion for their unwavering support of the journal. As a result of the journal's tremendous support, PCD is well positioned to continue its mission to provide the public health community with peer-reviewed research, evaluation, and practice content.

SCOPE AND FOCUS

PCD's versatile electronic publication platform and relevant, rigorous research continue to set it apart from other journals in the public health arena. With each weekly release of articles, PCD continues its mission to promote dialogue among researchers, practitioners, and policy makers worldwide on the integration and application of research findings and practical experience to improve population health. PCD has released 5 Calls for Papers in 2022. The following major topic areas are of great interest to the journal:

1. Sleep Deprivation, Sleep Disorders, and Chronic Disease

Preventing Chronic Disease (PCD) welcomes submissions for its upcoming collection, "Sleep Deprivation, Sleep Disorders, and Chronic Disease." Sleep is an essential daily behavior that supports physical, emotional, and psychological well-being. Nearly every system of the body depends on satisfactory sleep quality and quantity for routine healing, repair, and restoration. Factors that negatively affect health include sleep deprivation, poor sleep routines, and negative life events, as well as sleep disorders (eg, restless legs syndrome, insomnia). In addition, particularly short sleep duration may be associated with chronic diseases. Research shows that insufficient sleep is linked to an increased risk for the development of type 2 diabetes, and sleep duration and sleep quality have emerged as predictors of hemoglobin A1c level, a key marker of blood sugar control. Hypertension, stroke, coronary heart disease, and irregular heartbeat are more common among those with disordered sleep than those without sleep abnormalities. The link between psychological health and sleep has received attention as well; depressive symptoms can decrease when sleep apnea is effectively treated and sufficient sleep is restored. In addition, emerging studies are showing how the COVID-19 pandemic has led to significant changes in daily routines, mental health, and an increase among the general population in the prevalence of sleep disturbances during periods of quarantine.

PCD is interested in publishing papers from around the world that bring increased attention to the relationship between sleep and chronic disease and offer insight into successes and challenges of public health strategies to improve the quality of sleep. For this collection, PCD encourages the submission of manuscripts covering diverse topics using various PCD article types. Please refer to the Types of Articles page on PCD's website for specifications of each article type. Examples of topics include but are not limited to the following:

- Prevalence of healthy and unhealthy sleep duration among children, adolescents, adults, and older adults
- Latest research on causes, symptoms, and treatment of sleep deprivation and sleep disorders
- Differences in the amount, frequency, time, efficiency, and quality of sleep among racial and ethnic groups
- Research on the link between insufficient sleep and an increased risk for the development of type 2 diabetes
- Effects of the COVID-19 pandemic on sleep quality among the general population
- Effects of the COVID-19 pandemic on sleep quality among racial and ethnic groups
- Effects of social determinants (eg, job stress, neighborhood characteristics, education) on sleep quality and overall health
- The influence of discrimination and racism to racial and ethnic disparities on sleep quality
- The influence of alcohol consumption on sleep, including strategies to intervene on chronic drinking to improve sleep quality
- Effects of TV, internet, and other screen time on quality of life among children, adolescents, and adults
- Research exploring ways to optimize sleep duration and quality to improve blood sugar control in those with type 2 diabetes
- The link between hypertension, stroke, and coronary heart disease and disordered sleep
- Innovative interventions to reduce TV, internet, and other screen time among children, adolescents, and adults
- The relationship between psychological health, sleep deprivation, and sleep disorders

- Psychologically informed behavior-change approaches that contribute to improved sleep quality and improved chronic disease management
- Practical “how-to” tips based on the latest research on ways to improve sleep quality
- Public health awareness campaigns that promote good sleep hygiene, including behaviors that ensure sufficient, high-quality sleep
- Multilevel approaches for addressing disparities in sleep health, such as individual-level behavioral recommendations and health promotion interventions at multiple contextual levels (eg, family, schools, workplaces, media, and policy) among those diagnosed with chronic disease
- Clinical and population-based approaches to promote sleep health among children, adolescents, adults, and older adults
- The do’s and don’ts of healthy napping among children, adolescents, adults, and older adults
- Clinical, translational, and population-based research in pediatric sleep medicine

2. Advancing Chronic Disease Data Modernization Enhancements to Meet Current and Future Public Health Challenges

Preventing Chronic Disease (PCD) welcomes submissions for its upcoming collection, “Advancing Chronic Disease Data Modernization Enhancements to Meet Current and Future Public Health Challenges.” The nation’s health data systems are often antiquated, resulting in a myriad of negative effects on chronic disease prevention and health promotion efforts. In addition, antiquated data management systems often become difficult to support, maintain, scale, or integrate into new platforms. Enhancing the nation’s data systems will require making important changes to ensure skilled individuals are in place, new operational processes are adopted, and appropriate policies are established to facilitate monitoring and evaluation of data modernization action plans. This collection will feature peer-reviewed papers showcasing efforts under way by federal, state, tribal, local, and territorial public health agencies to collect, use, and share data. PCD is interested in publishing papers describing and highlighting data management infrastructure transformations that support response-ready systems capable of meeting current and future health challenges.

For this collection, PCD encourages the submission of manuscripts covering diverse topics using various PCD article types. Please refer to the Types of Articles page on PCD’s website for specifications of each article type. Examples of topics of interest include but are not limited to the following:

- Frameworks that guide data modernization changes and position data systems to improve reliability, serviceability, and trustworthiness
- Methodologies used to monitor, evaluate, and report effectiveness of data management systems
- Scientific documentation that tracks progress of continuous improvements and provides accountability
- Identification of key outputs and outcomes (ie, specific metrics) to track and monitor from inception that provide insights into what is working and/or what needs modification
- Strategies to maintain higher quality, more accessible, and more complete health data collection to ensure data is representative of all people
- Improving equity-centered data systems to collect data on social factors that impact health
- Identification of privacy-enhancing technologies that increase public confidence in data governance and reporting
- Protecting privacy-related policies governing the release of public health data

- Strategies to improve timeliness, completeness, and quality of critical data for public health responses
- The application of data modernization on public health efforts to improve chronic disease prevention and control

Learn more about this [Call for Papers](#).

3. Tools and Techniques to Effectively and Suitably Conduct Program Evaluation

Preventing Chronic Disease (PCD) welcomes submissions for its upcoming collection, “**Tools and Techniques to Effectively and Suitably Conduct Program Evaluation**.” Evaluation is one of the 10 essential public health functions and critical to effective public health practice, especially given its importance in monitoring and measuring the quality, pace, and direction of interventions and/or tracking the progress and impact of implementation. Stakeholders drive evaluations, unlike research, and should therefore be adapted to the contexts (ie, community, organization, or setting) being evaluated and to outcomes of interest. Evaluations should be flexible and adaptable and provide staff and stakeholders with reliable, high-quality information designed to address real-world issues.

For this collection, PCD encourages the submission of manuscripts covering diverse topics using PCD’s article type, **Tools for Public Health Practice**. Examples of topics of interest include but are not limited to the following:

- Identification of challenges in conducting performance monitoring and tips on how to overcome those challenges
- Adopting the appropriate theory of change to ensure alignment with data collection
- Identifying attributes, skills, and abilities in securing experts to assist with performance monitoring and program evaluation
- Frameworks and/or guides to assist program management with performance monitoring and program evaluation efforts
- Training and development of program staff to increase awareness of what is required to create tailored evaluation plans prior to program implementation
- How to conduct literature searches to develop plans for performance monitoring and program evaluation
- Tools to obtain outputs and outcomes of interest to key stakeholders
- Strategies to increase workforce capacity in performance monitoring and program evaluation
- Requirements necessary to design, implement, and value multisite evaluation
- Development of performance monitoring systems that capture and report data on how well aspects of public health programs are being implemented, including both barriers and enablers to implementation
- How to conduct multisite evaluations under various scenarios:
 - When using common interventions versus differing interventions
 - Generating and reporting findings with measures are standardized, while others are markedly different across sites (ie, some findings examine whether anything worked, while other findings compare the relative effectiveness of programs already shown to be successful)

10 Most Popular Articles of 2022

PCD is excited to announce its most popular articles published in 2022 as rated by Altmetric. Thousands of conversations about scholarly content happen online every day. Altmetric tracks a range of sources to capture, collate, and score this activity.

01. **Adults Who Have Never Been Screened for Colorectal Cancer, Behavioral Risk Factor Surveillance System, 2012 and 2020**
02. **Association of Burden and Prevalence of Arthritis With Disparities in Social Risk Factors, Findings From 17 US States**
03. **Challenges to Adolescent HPV Vaccination and Implementation of Evidence-Based Interventions to Promote Vaccine Uptake During the COVID-19 Pandemic: “HPV Is Probably Not at the Top of Our List”**
04. **Health Care Access and Use Among Adults With and Without Vision Impairment: Behavioral Risk Factor Surveillance System, 2018**
05. **Out of School Time Providers Innovate to Support School-Aged Children During the COVID-19 Pandemic**
06. **Rapid Evaluations of Telehealth Strategies to Address Hypertension: A Mixed-Methods Exploration at Two US Health Systems During the COVID-19 Pandemic**
07. **Changes Among Mexican Adults in Physical Activity and Screen Time During the COVID-19 Lockdown Period and Association With Symptoms of Depression, Anxiety, and Stress, May 29–July 31, 2020**
08. **Intentions and Attempts to Quit JUUL E-Cigarette Use: The Role of Perceived Harm and Addiction**
09. **Chronic Disease Management Service Opportunities for Community Pharmacists During the COVID-19 Pandemic**
10. **Prevalence of Chronic Diseases, Depression, and Stress Among US Childcare Professionals During the COVID-19 Pandemic**

About the Journal

PCD is a peer-reviewed public health journal sponsored by the Centers for Disease Control and Prevention and authored by experts worldwide. PCD was established in 2004 by the National Center for Chronic Disease Prevention and Health Promotion with a mission to promote dialogue among researchers, practitioners, and policy makers worldwide on the integration and application of research findings and practical experience to improve population health.

PCD's vision is to serve as an influential journal in the dissemination of proven and promising public health findings, innovations, and practices with editorial content respected for its integrity and relevance to chronic disease prevention.
